2D BARCODE SCANNER FOR OPENING THE DOOR

With the continuous advancement of technology, people are getting higher and higher financial security, personal safety and data security. For example, like access control, the traditional access control is an ordinary lock, and slowly developed to the password lock and fingerprint unlock. However, this still has certain defects. In this context, there is a new type of access control that enters people's field of vision. That is, the QR code on the mobile phone is aligned with the 2D barcode scanning module on the access control machine. Scan to unlock. Since each user's mobile phone QR code is fixed and contains all of the user's personal information, this is safer and more convenient than previous door locks.

Most of the popular intelligent access control scanning modules on the market use the 2d scanning module. Our company can provide RD007 door lock device for opening lock which has powerful performance and can easily read various printing media and display media such as paper, IC bard. Bar code, with a perfect integrated design, but with minimal installation space, lightweight, easy to embed in a variety of applications, not only can be embedded in a variety of self-service terminals, but also can be embedded in a variety of smart access, intelligent In the door.

Our company is a company committed to the development up to barcode scanner technology at the core of the automatic identification system integration organizations, enjoyed several years of industry experience and excellent reputation, in Shenzhen and Hong Kong branches, and has a very skillful, experienced, innovative R & D and after-sales technical support service team.
