

RAZLIKA IZMEĐU STANDARDOG I "PUBLIC" REŽIMA RADA

DIFFERENCE BETWEEN STANDARD AND PUBLIC WORKING MODE

Jun 2014.

RAZLIKA

STANDARDNI REŽIM RADA BRAVICE ZA GARDEROBNE ORMARIĆE

- Bilo da su samo za RFID Kartice,
- Bilo i da su za ŠIFRU i RFID Kartice

STANDARDNI REŽIM

Jedna bravica za garderobni ormarić autorizuje sa za 1, ili i do 15 različitih RFID kartica, zavisi od odabranog modela.

Ne retko, ima modela bravica, a gde jedna RFID Kartica može da važi i za dve samostalbe bravice, naravno istog proizvođača.

"PUBLIC" REŽIM

Vrata garderobnog ormarića su OTVORENA. Korisnik ubaci svoje stvari, yatvori vrata, prinese svoju, bilo RFID Kartica, ili bilo Mag. Stripe ID Karticu, ili unese svoju ŠIFRU, bravica zabravi.

Naravno samo ta, bilo Kartica, bilo ŠIFEA mogu isti da otključaju, i naravno MASTER, uvek

DIFFERENCE

STANDARD WORKING MODE FOR CABINET LOCKS (LOCKERS)

- For RFID Locks, only, or for
- RFID Cards and Keypad, as well

STANDARD MODE

One Cabinet lock can be authoreise for 1, or up to 15 RFID Cards, or CODEs, depend of lock model

Not rear, there are cabinet locks for which one RFID Cards can be valid for two standalone locks, identical producer, of course.

PUBLIC MODE

Cabinet door is opened, User put his belongings, close the door, "punch" his RFID Card or key CODE and lock is locked.

Of course, only that CARD, or CODE can unlock that particular lock, and MASTER Card, of course
