

MAGNETNI METAL-DETEKTORI ZA VOZILA

EFIKASNA ZAMENA ZA INDUKTIVNE PETLJE
(bez prosecanja asfalta, ili delimično prosecanje)

PRIMENA

Primarna primena je detekcija prisutnosti vozila, na saobraćajnici.
Posebno su zgodni za garaže gde se NE DOZVOLJAVA prosecanje asfalta!!!

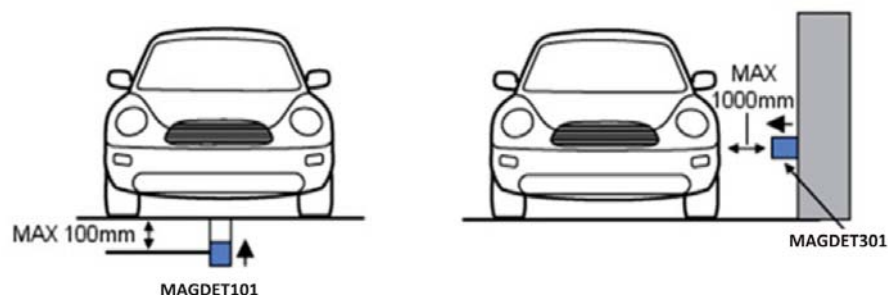

OSNOVNE KARAKTERISTIKE

MAGDET - completely non-contact Vehicle Detection Sensor

MAGDET101 – Omni directional

MAGDET302 – Uni directional

MAGDET series present an innovative solution for detecting cars (also possible for train and ship) on both outdoor road and indoor road and parking lot. MAGDET can replace IR and ultrasonic sensor for detecting car in parking slot and street corner. Unlike conventional sensors, snow, rain and leaves have no effect on MAGDET sensor because it works by electro-magnetic principles. MAGDET can be entirely packed to prevent it from malfunctioning by dusts and water in harsh environment. MAGDET series can also be used to count vehicles in highways, to detect a vehicle approaching in front of garages, drive in cafe, etc.

Installation of MAGDET is very easy. Just fix the sensor head like above picture, and the optional terminal board let the user build up his system very easily. MAGDET is also just fit for DIY sensor.

MAGDET is the acronym of CAR DETECTION, which is an innovative solution for non-contact vehicle detection using electro-magnetic sensor. MAGDET-101 sensor detects only vehicles and ferro-magnetic materials and a completely non-contact vehicle detector that can be fully enveloped in a waterproof case.

SLEDE PRIMERI

SISTEM
MAGDET101
DISPOZICIJA OPREME

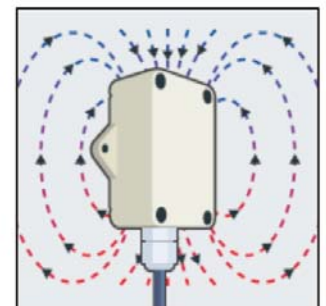

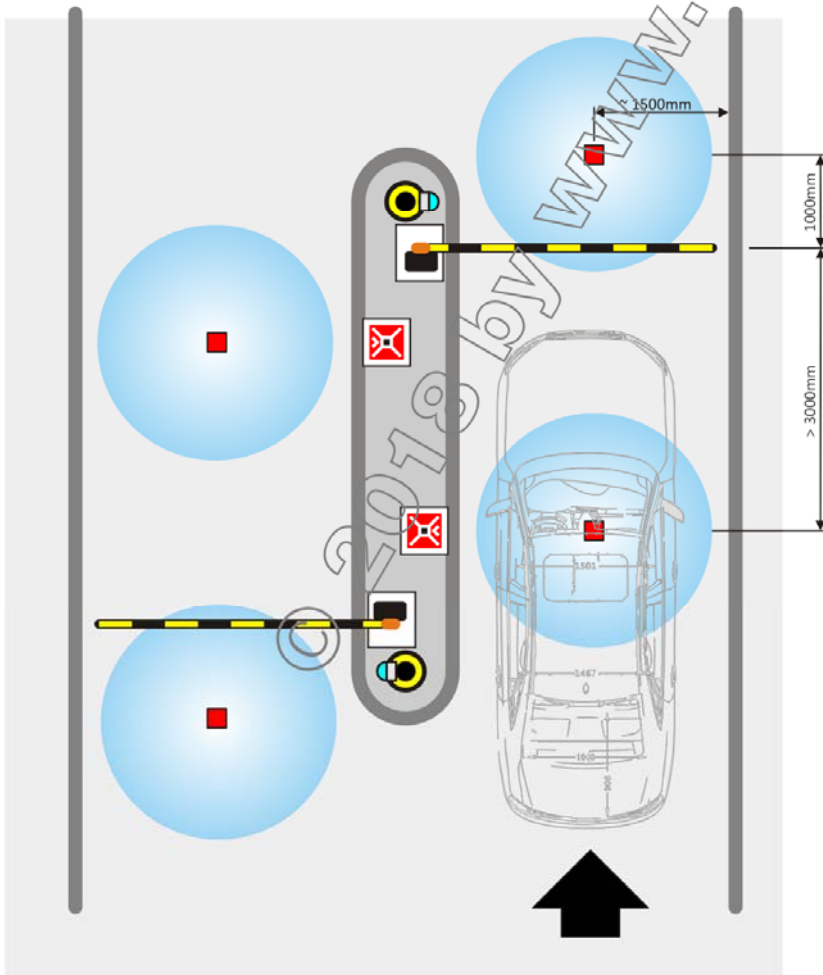

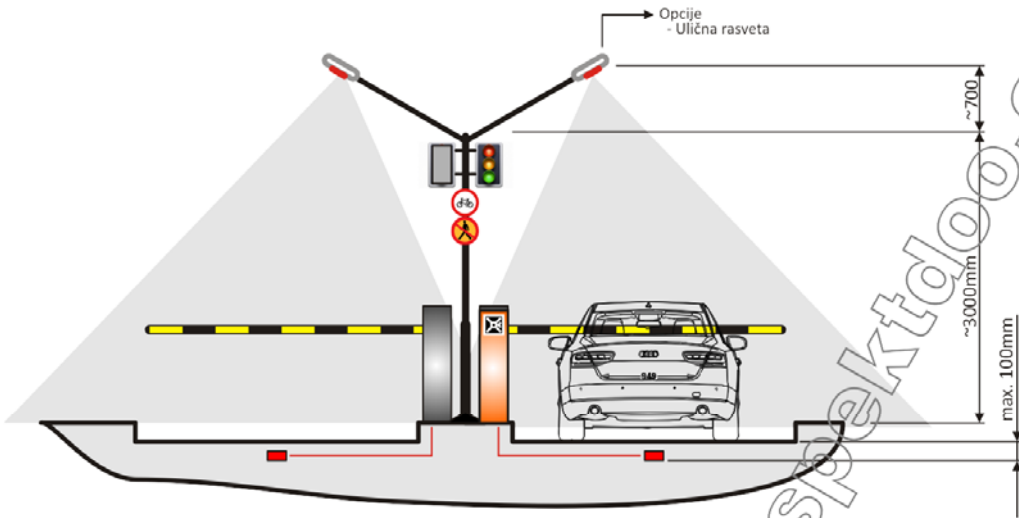

ASPEKT
SISTEM INTEGRATION D.O.O

KONTROLA PRISTUPA
Primena najsvremenijih tehnologija za evidenciju i kontrolu pristupa, ljudi i vozila.
